COMMERCIAL

As one of California's leading energy engineering firms, Brown, Vence & Associates, Inc. (BVA) has nearly 20 years of practical, hands-on experience providing both demand-side and supply-side energy services. Our offices in San Francisco and Roseville, California are staffed with engineers, planners, financial analysts, and resource specialists with experience developing cost-effective approaches to energy and resource management.

ENERGY AUDITS

BVA conducts a thorough survey, looking at the design and condition of lighting, heating, air conditioning, refrigeration, and other building components. We quantify energy savings potential using advanced building modeling software and other energy analysis tools.

ENERGY PROCUREMENT ASSISTANCE

With the passage of AB1890 in California and the deregulation of the electricity industry, building owners are facing new choices about how and where to buy power and other energy services. We are helping clients understand their options and make informed decisions based on their facilities' usage characteristics.

DESIGN REVIEWS

BVA helps clients design buildings that are as energy and resource efficient as possible. We suggest changes to the building envelope, lighting and mechanical systems that optimize building performance.

ENERGY MANAGEMENT PLANNING

We help institutions and local governments develop long-term energy management plans. Our plans assess energy efficiency potential, recommend implementation strategies, and evaluate financing options.

INDEPENDENT ENGINEERING REVIEWS

We provide independent engineering due diligence reviews of energy projects. Our reviews have helped financial institutions, energy companies and government agencies proceed with more than \$3 billion in project financing.

FINANCING, DESIGN, AND CONSTRUCTION SERVICES

After BVA has helped a client identify cost-effective energy savings or energy production opportunities, we can facilitate project financing, prepare designs and bid documents, offer design-build services, and/or provide construction management. To ensure that systems are properly installed, we can also provide construction monitoring, site inspection, project commissioning, performance testing, and operational review.

RENEWABLE ENERGY PROJECT DEVELOPMENT

BVA helps clients in the U.S. and abroad develop small-scale renewable power projects, including landfill gas, biomass, solar, wind, and hydroelectric projects.

TECHNOLOGY TRAINING

BVA provides training in energy-efficient technologies to engineers, architects, and building maintenance staff.

RESOURCE AUDITS

Our teams of energy and environmental specialists can provide comprehensive facility resource audits that address not only energy but also water, wastewater, and solid waste savings opportunities.

PROGRAM DESIGN

BVA helps government agencies and utility companies design programs that fulfill energy policy objectives.
